Figure DR1. A. Near-vertical contact between the Leech River Complex and Metchosin Fm. B. Fault scarp in an interfluve at site A. Geologists standing on upthrown and downthrown blocks. C. Red line delineates a gouge-bearing fault in Metchosin Fm at site B1. Outwash gravels are preserved in the apparent downthrown block. D. Uphill facing bedrock scarp at site B2. E. Photo showing till mantling hillside within site C.
A. Observation of slight northward deviation of scarp

B. Figure DR2. A. Profile locations used to calculate estimates of vertical separation at site A. Vertical separation estimates for each interfluve and channel as shown in part A.
