

**Table DR1.** Chemical composition (mg/l) of some acidic springs and corresponding draining streams. The chloride/sulfate ratio (Cl/SO<sub>4</sub>) in weight units. The last row presents the chemical composition of a typical cold meteoric water of a stream that is fed by perennial snow on the surface of an old lava flow

Name	T°C	pH	Na	K	Ca	Mg	Al	Fe	Cl	SO <sub>4</sub>	SiO <sub>2</sub>	Cl/SO <sub>4</sub>
Paramushir Island

**Figure DR1.**  $\delta D$  vs  $\delta^{18}\text{O}$  and  $\delta^{18}\text{O}$  vs chloride plots for acidic Cl-SO<sub>4</sub> waters and coastal springs in Kuril Islands (data from Kalachava et al., 2015 and 2016). On the upper plot isotopic composition of volcanic vapors from some Kuril volcanoes are also shown (Taran et al., 2018).
